**HELI**

**Our power and confidence are from  
reliable high quality products.**

Elegance in appearance, excellent in performance

## Ecology and saving

The QSF3.8 Euro V power engine of Cummins is equipped with DOC + DPF + SCR post-treatment technology meeting the most stringent emission standards;

## A reliable drive system

The transmission box designed and manufactured by HELI specially for the model is equipped on the truck. As reliable transmission system produced by HELI, it has been validated by over twenty years experience in the world market. Meanwhile, various ancillary devices of the power system ensure the reliability effectively.

Through LCD instrument and good human-computer interaction, the operator can monitor the truck status in real time.

**LED lighting system**  
Low energy consumption,  
high brightness and long life;

**Variable piston hydraulic pump**

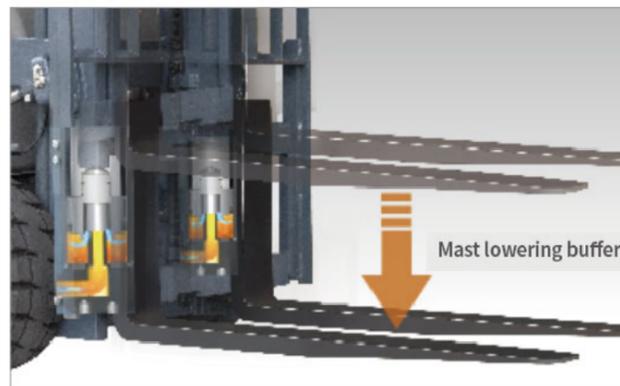

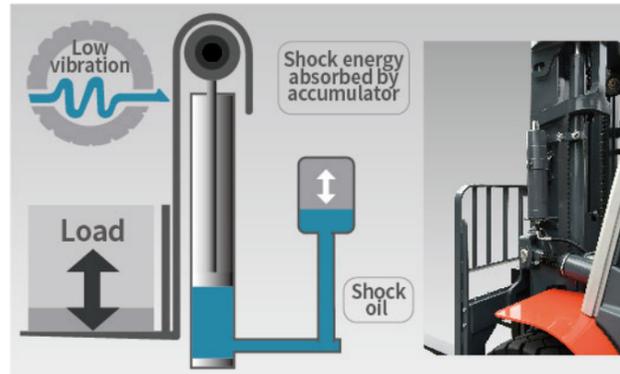

### HELI smart fleet management system (optional)

- |                      |                                       |
|----------------------|---------------------------------------|
| Vehicle positioning  | Vehicle management                    |
| Remote diagnosis     | Identification recognition (optional) |
| Remote monitoring    | Weight management (optional)          |
| Maintenance reminder | Collision management (optional)       |
| Statistical form     |                                       |

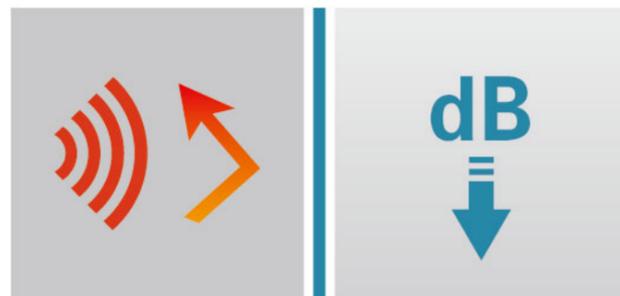

Option configuration of intelligent safety buffer system cushion operator from effects of riding over uneven surface and it is more comfortable.

- Vibration shock reduction**  
 When driving under load conditions, the impact caused by uneven surface is greatly absorbed, and the vibration is effectively reduced.
- Vibration and noise reduction**  
 When driving under load condition, the impact noise caused by uneven surface is greatly reduced.
- Reduced driving fatigue**  
 During the emergency stop operation during the load lowering process, the vibration and driving fatigue caused by inertia impact can be effectively reduced, and the driving safety can be improved.

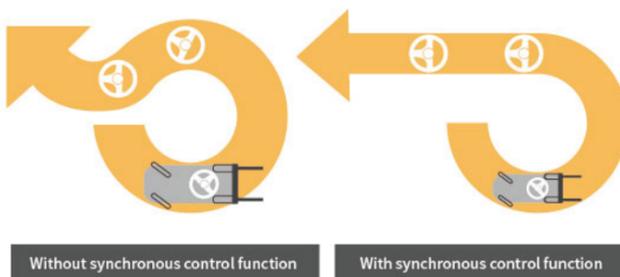

Standard configuration of oil cylinder lower buffer, comfortable operation

Multi system joint optimization design (active noise reduction of engine, transmission box, axle and hydraulic oil pump, application of sealing sound insulation materials of the whole truck) reduces truck noise.

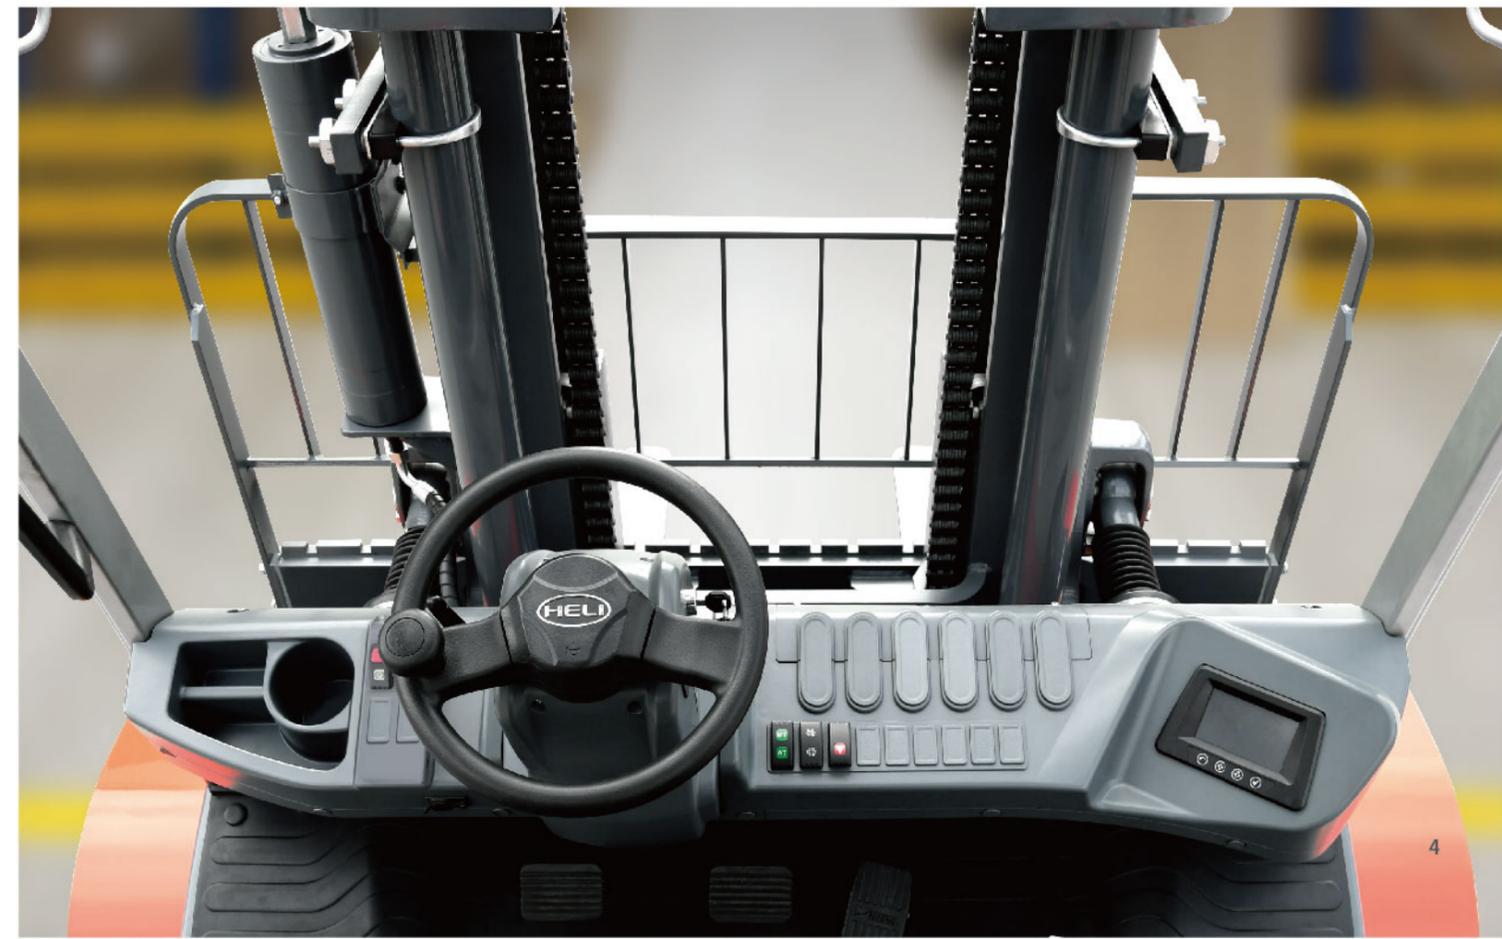

Hydraulic synchronous steering system can adjust steering wheel and wheel angle offset smartly and offers accurate steering and comfortable driving; (optional)

Ratchet type parking brake

It contains semi-enclosed normal seat, and adopts the techniques which are weight stepless adjustment and shock absorption, and vacuum cold foam molding. Seat armrest and backrest is a whole. Contact switch is optional.

## High efficient and safe

Smart protection on gearbox and engine ensure the safety of the whole truck.

Smart protection on high engine water temperature, low oil pressure, intake pressure and temperature

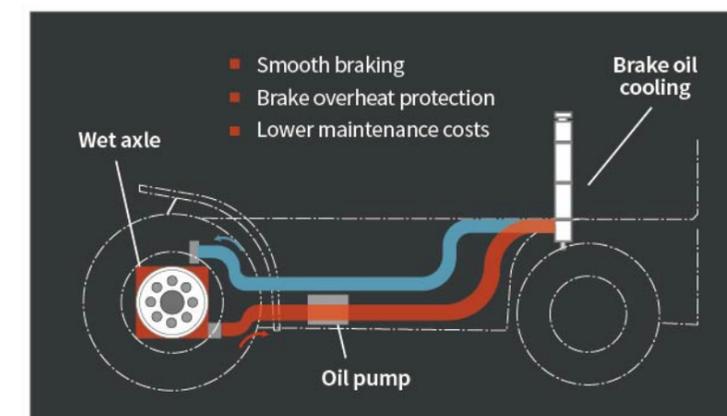

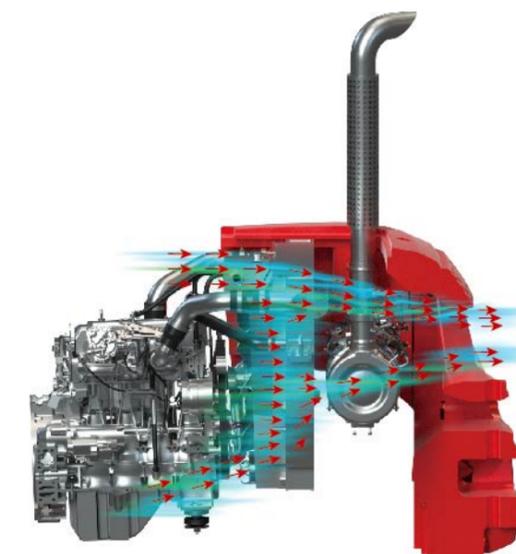

- Operator present system (after the driver leaves the seat accidentally, walking and lifting function of the whole truck is terminated) prevents the potential safety hazards caused by misoperation.
- When parking brake works, truck travel function is prohibited and thus the safety of driving operation is improved;
- Start protection function, fingertip operation system and anti-restart protection function from non-neutral gear ensure operation safety;
- The truck is equipped with large capacity air filter with safety filter element and pressure alarm function;
- The optimal design of power suspension increases the limit of limit impact to protect the power assembly from accidental impact;
- Truck safety warning: reverse image system, warning light, etc. (optional)

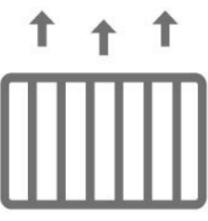

## Reliable quality

HELI has been committed to the research of truck reliability for many years, and the core parts have been verified by the market for a long time. The truck goes through high standard reliability test before marketing, long-time quality tracking and verification after marketing, and strict control of various performance indicators.

- The CAE forward design improves the strength of structural parts;
- Wet braking with forced oil cooling radiator ensures the stability and reliability of braking performance under extreme conditions;
- High performance cooling system ensures the heat dissipation performance of the whole truck.

 <p><b>Fan</b></p>	Air volume	18% ↑
	Static pressure	40% ↑
	Efficiency	35.7% ↑
	Noise	1.5dB(A) ↓
	Axial deformation	35.7% ↓
 <p><b>Radiator</b></p>	Water	15% ↑
	Transmission oil	50% ↑
	New drive axle oil radiator	

Note: the above data are from the comparison with G series 7t intenal combustion forklift truck

Harsh truck key parts endurance reliability test ensures the long-term reliability of core parts.

Fatigue test of drive axle

Fatigue test of steering axle

Fatigue test of lifting system

Impact test of overhead guard

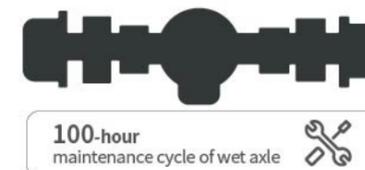

Higher standard endurance reliability test and high-intensity industrial verification of the whole truck ensures the reliability of long-term use of the whole truck;

## Efficient and convenient maintenance

Super long maintenance cycle of core parts

2000-hour maintenance cycle of transmission box

100-hour maintenance cycle of wet axle

Over 5000-hour service life of core parts

Integrated electrical cabinet and embedded instrument make disassembly and maintenance easy;

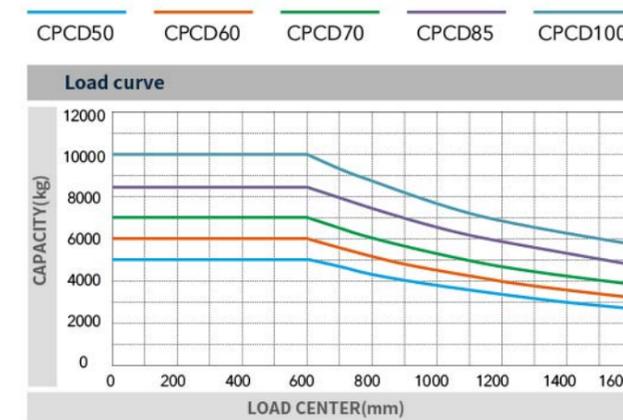

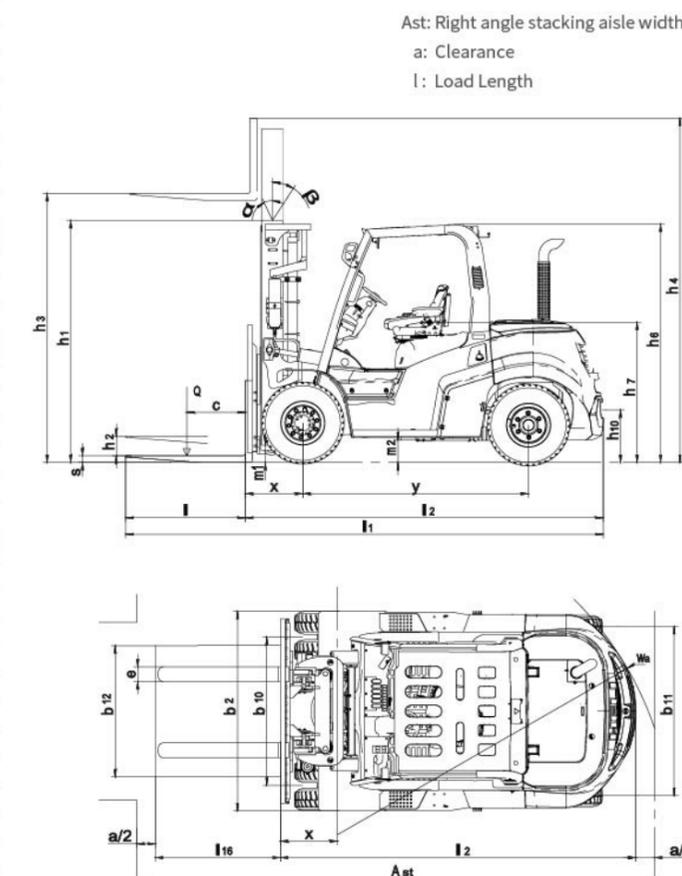

Timely remind maintenance information is given through instrument;

Large opening angle hood and detachable front and rear floor make check and repair easier;

Manufacturer and Technical Data						
Characteristics

7.01	Service brake/Parking brake				Power braking / Mechanical	
7.02	Operating pressure for attachments		Mpa		/	

**Note:** The vertical axis stands for load capacity and the horizontal axis stands for load center which is calculated from the front surface of the forks to the gravity of the standard load. The standard load means a cubic with 1000mm edge length. When mast is tilted forward, using non-standard forks or loading large goods, the load capacity will be reduced. The load capacity of standard mast at different load center can be known from this load chart.
